General Installation Practices

Dear Customer,

If you have any questions concerning the installation of your Banks Power System, please call our Technical Service Hotline at (888) 839-2700 between 7:00 am and 5:00 pm (PT). If you have any questions relating to shipping or billing, please contact our Customer Service Department at (888) 839-5600.

Thank you.

1. For ease of installation of your Banks system, familiarize yourself with the procedure by reading the entire manual before starting work.
2. The general assembly diagram (**Figure 1**) provides only general guidance. Refer to each step and section diagram in this manual for proper instruction.
3. Throughout this manual, the left side of the vehicle refers to the driver's side, and the right side to the passenger's side.
4. Disconnect the ground cable from the battery (or batteries, if there are two) before beginning work.
5. Route and tie wires and hoses a minimum of 6" away from exhaust heat, moving parts and sharp edges. Clearance of 8" or more is recommended where possible.
6. When raising the vehicle, support it on properly weight-rated safety stands, ramps or a commercial hoist. Follow the manufacturer's safety

precautions. Take care to balance the vehicle to prevent it from slipping or falling. When using ramps, be sure the front wheels are centered squarely on the topsides; put the transmission in park; set the hand brake; and place blocks behind the rear wheels.

CAUTION! Do not use floor jacks to support the vehicle while working under it. Do not raise the vehicle onto concrete blocks, masonry or any other item not intended specifically for this use.

7. During installation, keep the work area clean. Do not allow anything to be dropped into intake, exhaust, or lubrication system components while performing the installation, as foreign objects will cause immediate engine damage upon start-up.

Tools Required:

- 1/2" and 3/8" drive ratchets with inch and metric sockets and 1/2" and 3/8" drive extension
- Inch and metric combination or open-end wrenches
- Standard screwdriver
- Clean shop towels or rags
- Pry-bar

Highly recommended tools and supplies:

- Inch-pound and foot-pound torque wrenches
- oxy-acetylene torch
- Penetrating oil or light lubricant spray

Monster Sport Exhaust System Installation

1. As a precaution, disconnect the ground of the battery (if there is more than one battery, disconnect both).
2. Raise the vehicle and support it with properly weight rated safety stands, ramps or a commercial hoist. Follow the manufacturer's safety precautions. Take care to balance the vehicle to prevent it from slipping or falling. When using ramps, be sure the front wheels are centered squarely on the topsides; place the transmission in park; set the parking brake and place blocks behind the rear wheels.

CAUTION: DO NOT WORK UNDER ANY VEHICLE SUPPORTED ONLY BY A JACK. SEVERE INJURY MAY RESULT.

WARNING! The following step may require the use of a torch and/or saw. Proper safety equipment should be used. Failure to use proper safety equipment may result in severe injury.

3. Starting at the rear of the vehicle, remove the tailpipe near the muffler clamps by cutting through the connection or by removing the clamps and heating the joints with an oxy-acetylene torch to allow crimped pipes to separate. Remove the tailpipe from the vehicle.

4. Remove the clamps on the catalytic converter to the front muffler or if applicable, the intermediate pipe connection. **TAKE CAUTION TO NOT CUT OR DAMAGE CATALYTIC CONVERTER TUBING DURING THE REMOVAL PROCESS.** Separate the muffler/ intermediate pipe to catalytic converter connection.

Note: the use of an oxy-acetylene torch may be necessary. Remove the

muffler hanger pins from the rubber hangers with a pry bar (Spray lubricant will ease hanger removal) and remove the muffler/intermediate pipe or muffler assembly from the vehicle.

IMPORTANT: If the vehicle is equipped with a catalytic converter, it should be inspected. Diesel catalysts may become plugged with soot and can cause a restriction to exhaust flow, impeding performance. Shine a powerful flashlight into the inlet end of the converter. Observe the light through the other end of the converter. The full circle of the flashlight should be visible without any blockage in the grid work of the catalyst. If excessive soot is observed, the catalyst may need to be cleaned. TAKE PRECAUTIONS to avoid blowing soot toward the work area or where it could be inhaled. ALWAYS use breathing protection. Also inspect the catalyst for damage (i.e. chips, bent corners, etc.) to the grid work. If your catalytic converter is damaged, it may be covered under your vehicle's emissions warranty.

5. For Crew Cab Long Bed & Mega Cab models (160.5" wheelbase) **ONLY**, install a 4" exhaust clamp onto the front of the Banks intermediate pipe. Install the intermediate pipe onto the catalytic converter outlet. Install the intermediate pipe hanger onto the corresponding rubber hanger. Loosely snug the 4" clamp.

6. For all other models, install a 4" exhaust clamp onto the front of the Banks Extension pipe. Install the extension pipe onto the catalytic converter outlet. Loosely snug the 4" clamp.

9	Urocal, Banks Power	2	96009

*Mega Cab model uses intermediate pipe 53462 & tailpipe 53463

7. Install the front muffler hanger clamp onto the Banks Monster Muffler inlet with the hanger pin facing the front of the vehicle. Install the Banks Monster Muffler (note the muffler inlet labeling) onto the intermediate pipe / catalytic converter. Install the front hanger pin into the corresponding rubber hanger (see **Figure 2**). With the muffler inlet fully inserted, loosely tighten the hanger clamp on the muffler inlet swedge.

8. Install the rear hanger clamp onto the muffler outlet with the hanger pins facing the muffler. Also install a 4" exhaust clamp on the muffler outlet. Insert the two (2) hanger pins into the rear rubber hangers and adjust the hanger clamp to a position that best supports the muffler. (see **Figure 2**).

9. Route the tailpipe over the rear axle housing and into the muffler outlet.

Install the tailpipe hanger pin into the corresponding rubber hanger. Loosely snug the 4" clamp on the muffler outlet.

*Note: If installing optional tailpipe tip, cut off 4" from the tailpipe outlet before installing the tailpipe into Banks Monster Muffler. See **Figure 3**.*

If not installing the optional Banks Tailpipe Tip, skip to step 12.

10. Insert the optional tailpipe tip over the tailpipe outlet. Adjust the tip past the edge of the body or where aesthetically pleasing. Torque the band clamp to 35 ft-lb.

11. Remove the protective covering from the tailpipe tip.

CAUTION: The protective covering may ignite and burn if not removed prior to running the engine.

12. With everything positioned properly, begin to tighten the clamps starting with the ones closest to the turbo and working your way back. Evenly torque the exhaust clamps to 35 ft-lbs. Make sure that each slip is fully inserted (+/- 1/4 inch).

13. Your system includes two (2) Banks power logos. The logos can be mounted 1/2" to 1" above the "Cummins Turbo Diesel" emblem on the driver-side and passenger-side front fenders.

14. Re-connect the negative battery cable. Start the engine and listen for exhaust leaks. Tighten the exhaust clamps as necessary. Whenever possible, tack weld slip connections to prevent disengagement is recommended. The Banks Monster Exhaust installation is now complete.
