EAS (Expandable Accessory System)

The EAS system was designed with ease of installation in mind. The system itself is installed under the hood with only one cable that has to be routed through the firewall.

NOTE: The HDMI to OBDII cable is included with your display device.

Main Cable Connections

Securing the EAS

STEP 1 - Using the supplied zip ties, fasten the EAS connectors underneath the overhang which runs across the top of the fire wall. Keep the EAS assembly close to the driver side.

STEP 2 - Use any remaining zip ties to secure loose cable.

NOTE: If more than one EAS device is plugged together, use the long zip ties provided in the packet to connect their bodies together.

Routing the Main EAS Cable

STEP 1 - Locate an entry point from underneath the hood and into the cab.

TIP - Most vehicles will have a rubber or plastic plug that can be removed from the fire-wall. Other vehicles may already have cables or wire harnesses going through it.

STEP 2 - Route the rectangular (6 pin) connector from underneath the hood and into the cab. Leave the round connector under the hood.

⚠CAUTION: Be careful not to damage the connector and/or it's locking mechanism during installation.

STEP 3 - Plug the Main EAS Cable into the HDMI cable junction.

STEP 4 - Make sure this junction is free from moving vehicle components (e.g. brake pedal, gas pedal, steering column, etc)
