

Stainless Diesel Duramax Drop-In Turbo Cheat Sheet

Special Notes/Recommendations:

- 1) Maximum recommended boost on these units is 38-40psi
- 2) Vane position relearn is recommended but not always needed
- 3) Comes with all gaskets and a replacement vane position sensor as well as solenoid.
- 4) LLY-LMM
 - a. We only recommend a 61/62 unit on a BONE stock truck with nothing done to it performance wise.
 - i. The 61/62 size is not available for an LLY truck
 - b. If there is anything done to the truck as far as fueling/tune etc. we recommend the 63mm minimum.
 - c. For guys looking to push 800hp we have a 72/80 unit that will work very well
 - i. Redesigned vane system for optimal performance
- 5) LML
 - a. Stock operating system with EGR cooler are the only setups we would recommend the 61/62 unit
 - b. Anything done to the truck as far as injectors/fuel/tune we recommend the 63mm minimum.
 - c. Any high-pressure fuel pump conversions (CP3 swaps) we recommend the 65mm minimum.
 - i. CP3 swaps inherently create more power and drive the turbos harder.
